

ARTIS

PROGRESSIVE DESIGN SERIES

General use progressive lens with
generous visual areas for near and distance

Artis

Ideal as a daily all-purpose progressive lens

Ideal solution for users with demanding requirements for large visual fields at any distance. These patients are characterized by asking for a comfortable lens while at the same time wanting excellent vision of objects located at any distance.

ARTIS DESIGN OVERVIEW

Artis is produced with the latest Digital-Surfacing technology that assures clear vision and good quality. The compromise between visual field has been effectively balanced so it provides wearers with stable and generous areas for both distance and near vision.

Artis has not only large, balanced visual areas, but also its power transition represents an advantage due to having a corridor characterized by allowing the eye to move naturally.

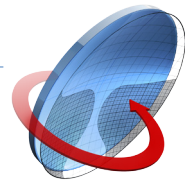

Minimum Fitting Heights Availables

Artis is available in 4 minimum fitting heights:

| | |
|---------------|------------------------------|
| MFH 14 | Minimum Fitting Height 14 mm |
| MFH 16 | Minimum Fitting Height 16 mm |
| MFH 18 | Minimum Fitting Height 18mm |
| MFH 20 | Minimum Fitting Height 20 mm |

Prescribing simplicity saves time

The technology incorporated in this lens brings together the latest optics developments and the simplicity of prescribing found with traditional progressive lenses. Manufactured with the most advanced technology this lens doesn't require any special parameter measurements because it is similar to traditional progressive, but is produced on the back side. All of this is possible thanks to an innovate way of producing lenses with the progressive surface cut on the back, rather than the front side.
